Programme

Erasmus +

About us

We are an educational institution - a kindergarten from Poland. We work with children aged 3-6. There are 125 children in our kindergarten. We enable them to learn about the world and we prepare for school teaching children mainly through playing and fun. Moreover, we support their parents through our educational and pedagogical activities.

For the last few years we have been focusing on ecology. We have organised a number of events, competitions and festivities. We focus our actions mainly in the local area.

We would like to start cooperation with institutions from Europe working with small children to share experiences and discover new methods of working with children in other countries.

About our project idea

The project's aim is to share the experience of working with children on ecological issues. We want to share the ideas for teaching ecology to small children. We are also interested in how teaching this subject can influence their behaviour in the future. We would also like to see how ecology is taught in kindergartens in other countries.
